

Process engineering of boards, foams, ...

Target group	Quality control, production management in production of thick materials (boards, foam, etc.)
Duration	1 day, starting at 9 a.m.
Location/Date	in house/on request
Fees	1200 € per day and group + travel expenses
Participants	min. 2 – max. 6
Content	Core concept of corona treatment - differentiating adhesion and wettability Surface chemistry and physics Concepts of direct and indirect treatment Reception of inks, glues and laminates Identifying treatment level of different materials Measuring the surface energy ISO 8296 Choosing the sufficient Corona Dosage and Power Factors
Objective	Achieving and guaranteeing efficient adhesion
